Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1.-20. (**Canceled**)

21. (**Currently Amended**) A selectable recording device for providing recording options to record ~~a least a portion of~~ a particular program, ~~the particular program including a plurality of content streams~~, the device comprising:

> a storage device configured to store program information received from an input
>
>> source, wherein the program information ~~includes~~ comprises a plurality of
>>
>> sets of available content streams for a plurality of program~~s~~, wherein each
>>
>> program of the plurality of programs is associated with one of the sets of
>>
>> available content streams ~~events, the plurality of content streams including~~
>>
>> ~~an audio stream for the program, a video stream for the program, and a data~~
>>
>> ~~stream for the program~~; and

> a processor configured to:

>> provide a user option to select a desired subset of the ~~plurality~~ set of
>>
>>> available content streams ~~for~~ associated with the particular program
>>>
>>> ~~event~~ for recording, wherein the subset excludes at least one
>>>
>>> available content stream from the associated set of available content
>>>
>>> streams ~~program event~~; and

>> receive user input indicating the desired subset of available content streams
>>
>>> ~~from the program event~~ for recording.

22. (**Canceled**)

23. (**Currently Amended**) The selectable recording device of claim 21, wherein the desired subset of available content streams includes no more than two types of the following types of content streams: an audio stream, a video stream, and a data stream.

24. (**Previously Presented**) The selectable recording device of claim 21, further comprising a decryption device configured to decrypt scrambled programming.

25. (**Currently Amended**) The selectable recording device of claim 21, wherein the program information ~~includes~~ comprises an MPEG transport stream, further wherein the processor determines an available content stream by parsing at least one MPEG table within the transport.

26. (**Currently Amended**) The selectable recording device of claim 25, wherein the processor is further configured to identify at least one available packet identifier that represents at least one available content stream within the transport stream.

27. (**Currently Amended**) The selectable recording device of claim 21, further comprising at least one decoder configured to decode at least one available content stream.

28. (**Currently Amended**) A method for providing recording options to a user, comprising:

receiving program information, wherein the program information ~~includes~~

comprises a plurality of <u>sets of available</u> content streams for ~~at least one of~~

a plurality of program<u>s, wherein each program of the plurality of programs</u>

<u>is associated with one of the sets of available content streams</u> ~~events~~;

providing a user option to select a desired subset of <u>the set of available</u> content

streams ~~for~~ <u>associated with</u> a particular program ~~event~~ for recording,

wherein the subset excludes at least one available content stream from the

<u>associated set of available content streams</u> ~~program event~~; and

receiving user input indicating the desired subset of <u>available</u> content streams ~~from~~

~~the program event~~ for recording.

29. **(Currently Amended)** The method of claim 28, wherein the program information

~~includes~~ <u>comprises</u> at least one of the following content streams: an audio stream, a video

stream, and a data stream.

30. **(Currently Amended)** The method of claim 28, wherein the desired subset of <u>available</u>

content streams includes no more than two types of the following types of content streams:

an audio stream, a video stream, and a data stream.

31. **(Previously Presented)** The method of claim 28, further comprising decrypting at least a

portion of the received program information.

32. (**Currently Amended**) The method of claim 28, wherein the program information

includes an MPEG transport stream, the method further comprising:

identifying available packet identifiers that represent available streams within the

transport stream; and

determining an available content stream ~~streams~~ by parsing at least one MPEG

table within the transport stream.

33. (**Currently Amended**) A system for providing recording options to a user comprising:

a receiver configured to receive program information from an input source, the

program information ~~including~~ comprising a plurality of sets of available

content streams for ~~a at least one of~~ a plurality of programs, wherein each

program of the plurality of programs is associated with one of the sets of

available content streams ~~events~~; and

a control system configured to:

provide a user option to select a desired subset of the set of ~~plurality of~~

available content streams associated with ~~for~~ a particular program

~~event of the plurality of program events~~ for recording, wherein the

subset excludes at least one available content stream from the

associated set of available content streams ~~program event~~; and

receive a user command indicating the desired subset of available content

streams ~~from the program event~~ for recording.

34. (**Currently Amended**) The system of claim 33, wherein the program information ~~includes~~

~~includes~~ comprises at least one of the following content streams: an audio stream, a video stream, and a data stream.

35. (**Currently Amended**) The system of claim 33, wherein the desired subset of <u>available</u> content streams includes no more than two types of the following types of content streams: an audio stream, a video stream, and a data stream.

36. (**Currently Amended**) The system of claim 33, further comprising a modulator configured to receive the subset of desired <u>available</u> content streams and associate the at least one content stream with a predefined frequency.

37. (**Currently Amended**) The system of claim 36, wherein the control system is further configured to communicate information to the modulator ~~to~~ <u>from</u> the user device.

38. (**Currently Amended**) The system of claim 33, wherein the program information ~~includes~~ <u>comprises</u> an MPEG transport stream, the system further comprising:

    a reverse path coupled to the control system, the reverse path configured to communicate user input to the control system; and

    a distribution system configured to communicate ~~the at least one requested content stream~~ <u>the desired subset of available content streams</u> to the user device.
